SENDQUICK ONCLOUD
THE KEY TO POWERFUL INCIDENT RESPONSE MANAGEMENT.

The Key to powerful incident response management.

With COVID-19 pushing business to work from home, staff and customers are faced with the challenges of data privacy and security risks. Many of the protection they enjoy while businesses are operating on-site may now be severely lacking. As such, Incident response planning should be made a core part of each company's cybersecurity plan - especially when their staff members are now not working from the office.

How can we help?

sendQuick onCloud is a systems availability monitoring and notification management platform for the cloud. It works with public cloud services to monitor systems, applications, services and network and flags up issues to your staff on duty.

We are able to:

1. Send Immediate Notifications on critical issues, giving an overview of your entire IT infrastructure.
2. Obtain a robust Roster Management so only relevant staff gets notified, preventing Alert Fatigue from massive influx of notifications.
3. Provide seamless Cloud Integration in public cloud services, and more!

Stay on top of your IT security today!
